

## **Contact List**

### **Introduction**

In this exercise, you have to implement a **RESTful Web API** and a simple **Web APP** using **Angular** for maintaining a **contact list**.

### **Specification**

1. Use C# and ASP.NET 5 to implement the Web API.
2. Your Web API must implement the technical specification defined in *swagger.yaml*.
3. View the Swagger specification in the Swagger Editor.
4. Use **DTOs** to transport the required information.
5. Design you own user interface for the Angular app. The user has to be able to use all functionalities defined in the Swagger file.
6. Consider using Bootstrap to make your UI more beautiful :)
